

Product Sheet

Cor Spec Primer 135

Stop Filiform Corrosion

ALEXSEAL® is the only system continuing to offer chromate primers to the marine market with **Cor Spec Primer 135**, which is formulated with strontium and barium chromate. **Cor Spec Primer 135's** technology, which has been protecting aircraft, industrial machinery and yachts for decades, is expressly designed to safeguard aluminum and steel surfaces from corrosion creepage.

Once corrosion starts on aluminum or steel surfaces, it can quickly spread beneath the coating system and cause extensive and costly damage. Minimize this spreading or creeping with **ALEXSEAL® Cor Spec Primer 135** in order to limit the affected area. The unique primer formulation allows the product to be overcoated the same day it is applied with either **ALEXSEAL® Premium Topcoat** or another primer, if additional surfacing and fairing is required. It can be used above and below the waterline and on interior surfaces where corrosion protection is desired.
