

Product Sheet

New Acrylic Reducers

Whether hot or cold

Suitable coatings should perform perfectly in various climatic conditions, such as hot environments in the southern states of the USA, Asia, and the Mediterranean region. And cool climates in the far north of America and Scandinavia.

It is therefore essential that our products can be ideally adjusted to the painting requirements. For this reason, now two reducers for our Alexseal Acrylic Topcoat X will simplify your application. Both have the same focus: Improved curing.

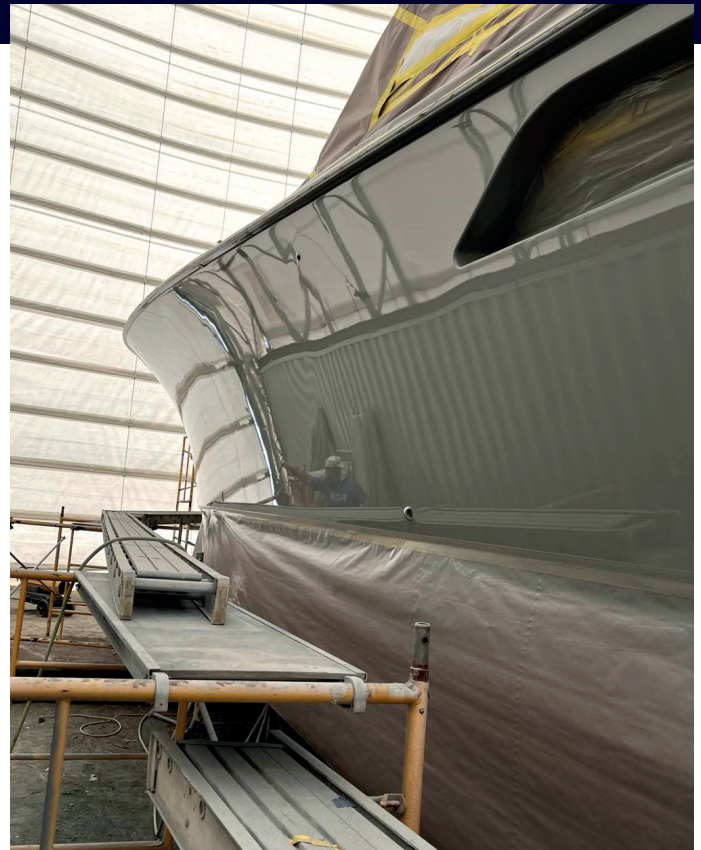

R5101 Acrylic Reducer #1 Standard

This reducer is ideal for paint jobs in moderate and warm conditions. This new formula will replace the Topcoat Reducer R5050.

R5102 Acrylic Reducer #2 Cold

We recommend the new R5102 Acrylic Reducer #2 Cold for applications in lower temperatures and for smaller parts. It offers a faster curing time even in colder climates.

Matching your climatic conditions with the fitting reducer is a good base for a perfect paint job.

Your Benefits

- Better flow at different temperature ranges
- Faster curing to final hardness
- Better drying behavior also in colder temperatures
